TECHNICAL SKILLS

C# C++ HTML5 CSS3
JS Lua PHP Java
.NET Git Docker
Nginx Linux Optimization
Firewall SSH
Client-Server API
Containerization

SOFT SKILLS

- Troubleshooting & Problem Solving
- Teamwork & Active Listening
- Autonomy & Curiosity
- Rigor & Organization
- Community Management

👤 PROFESSIONAL SUMMARY

Currently training as a Junior .NET Developer, I consistently enhance my skill set through self-directed learning, with a focus on Linux system administration. Blending technical discipline, diagnostic proficiency, and solid communication skills from previous project management experience, I am looking to contribute my passion and adaptability to a forward-thinking organization.

🎓 EDUCATION & TRAINING

.NET Developer

05/2026 - 03/2027

Technifutur & Cefora

Intensive Full-Stack .NET development bootcamp (C#, ASP.NET, Angular)

Bachelor in Physical Sciences

02/2022 - 06/2025

University of Liège (Interrupted course of study)

Coursework included algorithms and C++ programming.

Secondary Diploma (CESS)

09/2015 - 06/2021

Institut St-Joseph Welkenraedt

Mathematics & Sciences – Dutch/English – Computer Science

🧰 WORK EXPERIENCE

Bartender (Student Job)

01/2025 - 07/2025

Tasty MontLégia, Liège

Demonstrated efficiency, speed, and stress tolerance in a fast-paced environment.

⚙️ METHODOLOGY & APPROACH

Attentive to user needs and committed to code quality, I follow a disciplined methodology: breaking down complex problems into subtasks, systematic testing, strict Version Control using Git, automated deployments, and continuous monitoring of .NET and web industry standards.

- Football / Running / Weightlifting
- Socializing & Active Community Member
- Game Modding & Scripting

FEATURED PROJECTS

LostDynasty — Server & Infrastructure Management

End-to-end setup and administration of a high-performance community gaming server:

- Developed custom, high-load optimized **Java (.jar)** plugins integrated with databases.
- Deployed and configured dedicated **Ubuntu VPS**: DNS routing, SSH hardening, security rules (UFW, Fail2ban), and anti-DDoS protection.
- Orchestrated production environments using **Pterodactyl & Docker**.
- Led overall project strategy, supervised staff teams, and coordinated QA testing phases.

Bruxelles Life (FiveM)

Feature development and team management for a GTA RP server (Full V2 Overhaul):

- Programmed **Lua client/server scripts** featuring interactive web UIs (HTML5, CSS3, JavaScript).
- Designed and optimized **MySQL / oxmysql** database schemas.
- **Lead Staff & Coordination**: managed staff teams, defined functional requirements, and supervised freelance developers.
- Provided technical consultancy, code audits, and support to external gaming communities.

Discord Bots & CI/CD Pipelines

Engineered automated integrations and moderation bots (Bruxelles Life, Technifutur):

- Developed **Node.js** Discord bots featuring anti-raid protection, Captcha verification, and game server synchronization.
- Established **CI/CD** workflows: local development, Git/GitHub version control, and **GitHub Actions** automation.
- Implemented SSH automated deployments and process management using **PM2**.

Web Projects & Furrtiv Ecosystem

Built professional websites and custom digital solutions:

- Developed a personal dynamic portfolio in **PHP** with internationalization (i18n) and automated deployment.
- Partnered with streamer **Furrtiv**: built a showcase website with URL redirection handling and a custom Discord bot.
- Designed and delivered technical web infrastructure for additional projects (Younye, LostDynasty).
